### Enterprise Solutions

Most companies are struggling with increasing costs and task overload due to staff reductions. The current economic situation and shrinking revenues have catalyzed the demand for more comprehensive and proactive control of operational costs - not to mention the demand for their immediate and significant reduction.

If you are a CFO, CIO, IT Manager or Telecom Manager – how do you control your ever increasing mobility expenses and manage your enterprise wireless environment?

The answer is...*with extreme difficulty.*

If you have been tasked with managing wireless, you know what a challenge it can be. There are software applications that can automate some of the lifecycle tasks; however implementing these solutions tend to be time and resource consuming – not to mention costly - and generate a very difficult to predict return on investment.

So, how do you solve the seemingly unsolvable mobility management issue?

**with MobilChek**

## Mobility Management Dilemma

Professionals tasked with managing all aspects of their wireless environment – or those simply asked to immediately “get their arms around wireless” are all faced with the same managerial questions...

- Are our wireless expenses out of control?
- Did we spend too much last month, are we spending too much this month and how do we reduce and control it next month when I don't even get the bill till mid month?
- TEM or WEM? – I still don't know which solution or company are the right choice for **MY** mobility needs.
- We know we need mobility management but how are we supposed to afford the \$3 to \$8 per device per month?
- We are overburdened - we don't have the resources to research and implement a system that address our immediate needs let alone alleviate them going forward.
- We honestly just don't know what we don't know
- Management has asked for answers and quite honestly I am afraid of what we - and they – might discover.
- We need a way to monitor wireless consumption and make sure our acceptable usage policies are adhered to sure our

The image displays four screenshots of a mobility management software interface. The top screenshot shows two pie charts representing data distribution. The second screenshot shows a table with columns for 'Plan', 'Status', 'Last Billing', 'Usage', 'Plan Price', 'Usage Price', and 'Total Price'. The third screenshot shows a table with columns for 'Phone Number', 'Last Billing', 'Status', 'Plan', 'Usage', 'Plan Price', 'Usage Price', and 'Total Price'. The bottom screenshot shows a configuration page for 'Usage Management' with various settings and a 'Save' button.

## Mobility Management Solution

First, you should know you are not alone, mobility management is a struggle for all companies.

But there is an answer and a solution to all of these questions and issues.

The solution is called **MobilChek™**

**MobilChek™** functions independently of the provider, as well as the respective contracted service, and or pooling plan. The solution is web based (or can be deployed behind your firewall), customizable and can typically be deployed within a few days – not weeks – not months.

**MobilChek™** is built upon patented technology and capitalizes on patent pending “PACE” process methodology to provide comprehensive mobile device, account, policy compliancy and usage management and control in real time.

Account administrators are provided access to our proprietary **PACE Control Console** to schedule automated monitoring, define limit thresholds, and set notification parameters.

Controls are set by individual number or by categories. Usage reporting and metrics can be defined by individual number, categories, locations, departments, plans, and cost allocation codes (GL) or can be customized for specific client requirements.
